

DIPENDRA PAUDYAL

BCA Student | Backend Developer Intern Candidate | MERN Stack

✉ dipendrapaudyal9789@gmail.com | ☎ +977-9861009789 | 💻 github.com/dipu106 | 📍 Kapan, Kathmandu, Nepal

PROFILE

Enthusiastic BCA student at Texas International College with a strong foundation in full-stack web development using the MERN stack. Proficient in building RESTful APIs, implementing authentication and authorization systems, and connecting frontend and backend services. Eager to contribute hands-on backend development skills in a professional internship environment and grow within a collaborative engineering team.

TECHNICAL SKILLS

Backend: Node.js, Express.js, REST API Design, JWT Authentication, Bcrypt, Session Management

Frontend: React.js (Advanced), Context API, React Router, Axios, HTML5, CSS3, JavaScript (ES6+)

Auth & Security: Authentication, Authorization, Two-Factor Authentication (2FA), Role-Based Access Control

Databases: MongoDB (Mongoose ODM), MySQL

Other Languages: Java (Basics), PHP (Basics)

Tools & Platforms: Git, GitHub, VS Code, Postman, npm

EDUCATION

Bachelor of Computer Applications (BCA): *Texas International College* 2022 – Running (7th Semester)

Chabhail, Kathmandu, Nepal

Relevant Subjects: Data Structures & Algorithms, Web Technology, Database Management Systems, Object-Oriented Programming, Computer Networks

PROJECTS

Shop Inventory Management System

Personal Project

Tech Stack: Node.js, Express.js, MongoDB, Mongoose, React.js, JWT

- Built a full-stack inventory management system allowing shop owners to add, update, and delete products with real-time stock tracking.
- Designed and implemented a secure REST API backend using Express.js with JWT-based authentication to protect all routes.
- Created a responsive React frontend with dynamic product listing, search filtering, and role-based dashboard views for admin users.
- Connected frontend and backend seamlessly using Axios, handling loading states, error responses, and token refresh logic.

Two-Factor Authentication (2FA) Web Application

Academic Project

Tech Stack: React.js, Node.js, Express.js, MongoDB, Nodemailer / OTP Library

- Developed a secure login system featuring email-based OTP two-factor authentication on top of standard username/password login.
- Implemented session management and token expiry logic to ensure OTP codes are single-use and time-limited for security.

- Designed a clean, user-friendly React interface guiding users through the multi-step authentication flow with real-time feedback.
- Structured codebase following MVC pattern on the backend, improving maintainability and separation of concerns.

CORE STRENGTHS

- Strong grasp of full authentication & authorization flows — JWT, sessions, 2FA, role-based access control.
- Confident connecting React frontends to Node/Express backends via REST APIs using Axios and fetch.
- Comfortable working with both SQL (MySQL) and NoSQL (MongoDB/Mongoose) databases.
- Quick learner with foundational knowledge of Java and PHP, enabling cross-language adaptability.
- Consistent GitHub contributor — version control and collaborative coding practices followed on all projects.

EDUCATION & ACTIVITIES

Active Member — *College Tech Community*

2022 – Present

Participated in college workshops on web development, databases, and software engineering best practices.

LANGUAGES

Nepali (Native) | **English** (Professional Working Proficiency)

Application for the Backend Development Internship

Dear Hiring Manager / Internship Coordinator,

I am Dipendra Paudyal, a seventh-semester Bachelor of Computer Applications (BCA) student at Texas International College, Kathmandu. I am writing to express my strong interest in the Backend Development Internship at your organization. With a solid command of the MERN stack — MongoDB, Express.js, React.js, and Node.js — and a genuine passion for building reliable, well-structured server-side systems, I am excited to bring my skills into a professional setting and contribute meaningfully to your team.

Throughout my studies, I have developed strong practical skills in designing and building RESTful APIs using Node.js and Express.js, implementing JWT-based authentication and authorization, and managing data with both MongoDB (Mongoose) and MySQL. I am equally comfortable on the frontend, having built advanced React applications that consume backend APIs using Axios, handle token management, and enforce role-based access control. Notably, I independently developed a Two-Factor Authentication (2FA) web application and a full-stack Shop Inventory Management System — projects that reflect my ability to architect complete, secure web solutions from the ground up.

Although I am a fresher with no formal work experience, I am a disciplined self-learner who takes initiative. I keep all my projects version-controlled on GitHub, follow structured coding practices such as the MVC pattern, and continuously seek to improve through hands-on building rather than theory alone. I believe an internship at your company would be an ideal environment for me to apply what I have built independently, receive guidance from experienced engineers, and grow rapidly into a strong backend developer.

I would welcome the opportunity to discuss how my skills and enthusiasm can add value to your team. I have attached my CV for your review and am available for an interview at your convenience. Thank you very much for your time and consideration — I look forward to hearing from you.

Yours sincerely,

Dipendra Paudyal
